Targeting a **Senior Software Engineer, Engineering Lead, or Staff Engineer** role to lead architecture, technology strategy, engineering excellence, and product modernization while delivering scalable solutions, mentoring teams, and driving measurable business and customer outcomes.

SUMMARY

- **Senior Software Engineering professional** with **over 7 years of experience** in architecting and delivering enterprise SaaS platforms, identity & access management solutions, and distributed systems across high-scale product environments.
- **IAM & Security Architecture specialist** with expertise in RBAC, OAuth 2.0, SAML 2.0, OIDC, SCIM, JWT, SSO, OPA, and Rego; modernized the authorization architecture into a scalable, multi-product RBAC framework with granular, policy-based access controls.
- **Backend Engineering expert** with strong hands-on proficiency in Node.js, NestJS, Golang, GraphQL, gRPC, microservices, MongoDB, PostgreSQL, Redis, and AWS; engineered authentication infrastructure supporting **2-3B daily requests** with high availability and performance.
- **Technology & Production Engineering leader** driving security-critical enterprise initiatives, architecture modernization, observability, reliability, compliance, and SLA excellence; shipped solutions that cleared third-party audits with **zero findings**, accelerated incident resolution by **3x**, and reduced resolution time by **~30%**.
- **AI-augmented engineering professional** leveraging Claude Code, GPT, and GitHub Copilot across the SDLC to improve development velocity, code quality, testing, debugging, RCA, and security analysis; contributed to **2-3x higher PR throughput** and **85%+ test coverage**, complemented by expertise in React.js, TypeScript, CI/CD, Docker, Jenkins, and modern engineering practices.

CORE SKILLS

Identity & Access Management: RBAC, OAuth 2.0, SAML 2.0, OIDC, SSO, SCIM, JWT, MFA/TOTP, Zero Trust Architecture, PassportJS, OPA, Rego, Okta, Microsoft Entra ID, Ping Identity

Backend Engineering: Node.js, NestJS, Express.js, Fastify, Golang, REST APIs, GraphQL, gRPC, Protobuf, Socket.io, Microservices

Frontend Engineering: React.js, TypeScript, JavaScript, Redux, Redux Thunk/Saga, AngularJS, SCSS, Styled Components, Micro-Frontends

Databases & Caching: MongoDB, PostgreSQL, SQL, Redis, ioredis, Mongoose, Sequelize, Firebase (Auth, Firestore, Storage, Hosting)

Cloud & Infrastructure: AWS EC2, S3, Lambda, CloudFront, CloudWatch, Route 53, IAM, Nginx, Docker

Testing & Quality: Jest, Unit Testing, Integration Testing, E2E Testing, TDD, Test Automation, 85%+ Coverage

DevOps & Observability: Jenkins, GoCD, PM2, Datadog, Observe, CI/CD, Postman, Jira

AI-Augmented Engineering: Claude Code, GPT, GitHub Copilot, AI-assisted Code Review, AI Test Generation, AI Debugging, AI-driven RCA, AI Security Analysis, AGENT.md/SKILLS.md agent-navigation docs, prompt & playbook libraries, prompt caching & model routing

MAJOR CLIENTS

- **Pinzon Health:** Remote patient monitoring — built the onboarding-to-monitoring flow ingesting live vitals from connected BP devices for remote review and in-app medication assignment, plus automated alerts that cut clinician review effort.
- **Clipboard Health:** Nurse staffing marketplace — implemented nurse-side shift search: geolocation filtering and apply-for-shift logic connecting nurses to nearby hospital shifts.
- **FutureSkill:** Sweden-based EdTech — built course-delivery features, user management, and front-end experiences.
- **SoftwareSkills.se:** Sweden-based job application platform — contributed across back-end services and front-end platform work.
- **Xtensio:** Canva-like design platform — cut editor render time by 30%, rebuilding the component rendering path with lightweight components; shipped layering and new design components.

EDUCATION

- **Amity University Madhya Pradesh:** Bachelor of Technology, Computer Science · Minor: Corporate Finance · 2015 – 2019

CERTIFICATIONS

- **Data Structures & Algorithms** – Scaler · Mar 2025
- **Web Security: OAuth and OpenID Connect** – LinkedIn Learning · 2024

EXPERIENCE

Contentstack India Pvt. Ltd. · Remote, Pune

Senior Software Engineer I · Aug 2024 – Aug 2026

Software Engineer II · Nov 2022 – Jul 2024 (promoted)

Identity, Access & Authorization:

- Transformed the platform from two fixed roles into an unlimited, multi-product RBAC framework with granular permission controls, strengthening customer governance and cutting support escalations.
- Architected and shipped the multi-org invitation and onboarding workflow for a multi-tenant model, assigning permissions at invitation time and supporting 2 product teams through end-to-end RBAC adoption using OPA/Rego policy enforcement.
- Extended RBAC into SSO onboarding, SCIM onboarding, and the role-update flow, shipping 2–3 default roles per product alongside custom role creation.
- Built a unified authentication layer spanning multi-tenant OAuth 2.0, SAML-based enterprise SSO, and SCIM provisioning, enabling seamless integration with enterprise identity governance ecosystems and supporting faster procurement approvals.
- Partnered with Okta and Microsoft Entra ID engineering to ship native SAML SSO and SCIM applications, now live in both marketplaces.
- Built an internal gRPC-backed auth npm package adopted by 9 product teams, letting them consume authentication and RBAC without reimplementing either.

Session Governance & Security:

- Launched a self-serve session management suite covering configurable idle/absolute timeouts, user-level whitelisting, and active session termination, giving enterprise customers direct compliance controls without support intervention.
- Achieved zero findings in a third-party security audit for the session management rollout, eliminating a recurring procurement concern for enterprise customers.
- Drove remediation of a separate third-party security audit, cutting open findings from ~150 to 10 within two quarters, and extended 2FA from SMS-based to authenticator-app-based across the platform.

Platform Scale, Observability & Reliability:

- Optimized authentication infrastructure serving approximately 2–3B requests daily, redesigning the Rego/OPA policy evaluation and Redis caching data models to cut latency on the slowest requests from ~13s to under 200ms.
- Re-engineered service logging around high-signal events, improving observability and RCA precision while reducing Datadog/Observe consumption costs.
- Owned end-to-end authentication incident response, increasing incident resolution throughput by 3x and reducing average resolution time by ~30%, consistently maintaining SLA commitments for enterprise accounts.

AI-Augmented Engineering:

- Integrated AI across the software delivery lifecycle, applying Claude Code, GPT, and GitHub Copilot to development, pre-review, test generation, debugging, merge-conflict resolution, incident RCA, and security analysis.
- Contributed to a 2–3x increase in PRs per sprint while improving automated test coverage from 75% to 85%+, increasing engineering throughput without proportional headcount growth.
- Authored the AGENT.md/SKILLS.md and cross-repo agent-navigation docs mapping features and flows to exact files, plus a feature-wise prompt/playbook library (RCA, test generation, conflict resolution) that cut bug turnaround from 2–3 days to one.

Awards received: Thank You Award — Q1 2026 (session management rollout, zero audit findings), Q4 2024 (sustained ownership of the RBAC platform), Q3 2023 (customer-facing auth failure resolution and policy hardening).

Bestpeers Infosystem Pvt. Ltd. · Hybrid, Indore

Senior Software Engineer · Sep 2021 – Nov 2022

Software Engineer · Sep 2020 – Sep 2021 (promoted)

- Led 5+ developers technically across concurrent client engagements, running Agile ceremonies (Scrum/Kanban) — sprint planning, grooming, and retrospectives.
- Accelerated feature releases by decomposing a monolithic application into 3 independently deployable microservices, reducing cross-team dependencies and enabling parallel development across healthcare, edtech, and staffing platforms.
- Sustained 80%+ on-time delivery across concurrent client engagements, protecting schedule commitments, client relationships, and renewal opportunities in high-pressure environments.
- Strengthened software quality by driving test coverage beyond 85%, reducing regression incidents and lowering post-release defect remediation effort.
- Developed full-stack product enhancements across APIs, back-end services, user management, integrations, and web applications for multiple client-facing SaaS products.

Gyrix TechnoLabs LLP · On-site, Indore

Software Engineer · Feb 2019 – Sep 2020 (incl. 2-month internship)

- Accelerated deployment cycles by implementing CI/CD pipelines, reducing deployment time from 2–3 hours to under 30 minutes while eliminating manual deployment errors.
- Modernized legacy front-end architecture by migrating AngularJS applications to React.js micro-frontends, cutting load time from 3–4s to under 1.5s and reducing front-end development effort.
- Maintained 80%+ test coverage across applications, strengthening release quality and reducing production defects.
- Established a predictable release cadence through biweekly product demonstrations for 2 platforms across a 19-month engagement, iterative feedback cycles, and consistent execution across web and mobile applications.
